

MODBOX™ **diy fairy lanterns**

This kit lets you create two magical mason-jar style lanterns, each with a battery-powered LED lid. The idea is simple: decorate the jars any way you like to bring your fairy lanterns to life. There's no wrong way—just imagination. A popular method is brushing glue inside, sprinkling glitter, and then layering on leaves, twine, flowers, butterflies, and more. Add your own touches to make each lantern unique.

Step by Step Instructions, or follow our video online via the QR on the box.

1. Prep: Lay out your materials. Insert AAA batteries (not included) into each LED lid.
2. Glue base: Brush glue inside the jar (or outside if you prefer a textured look).
3. Add sparkle: Sprinkle glitter onto the wet glue and swirl the jar to coat.
4. Decorate: Use included materials—leaves, silk flowers, butterflies, twine, etc.—to style your lantern. Add your own items if you like.
